DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 35, 39, 40, 44-45 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

The Examiner thoroughly reviewed Applicant's specification in attempts to further clarify the meaning of Applicant's claim 35 and found that the specification did not describe a "processing the graded region so as to introduce a second kind of strain" as claimed by the Applicant.

This processing step is critical to Applicant's claim language because Applicant has asserted that the processing step recited in claim 35 distinguishes his claim language from the teachings of Ismail. Without a clear understanding of what processing induces the second kind of strain, the Examiner cannot find such an argument persuasive. The Examiner respectfully requests that the Applicant respond by pointing out specification where the specification describes a processing to induce a second kind of strain so that examination may go forward with full consideration given to Applicant's arguments.

Art Unit: 2813

Moreover, claim 45 recites that the first kind of strain is compressive and the second kind of strain is tensile. The Examiner found no description, within the specification, of any kind of processing which introduces a tensile strain. In fact, the specification was absent any teaching of a “tensile strain”.

Claim 44, recites a further processing step of planarizing the substrate; this further comprising language suggests that the planarizing step claimed is not the same “processing” referred to in claim 35. Again returning to the language of the independent claim, the Examiner cannot ascertain what “processing” would induce the second kind of strain (tensile strain) claimed by the Applicant because it is not described within the specification.
